Context-Sensitive Help and Offline Documentation in Browser Not Available	22
Performance Degradation When Using Unsupported Oracle versions and Oracle JDBC drivers	22
Removal of Interactive Mode in MZSH	22
Known Issues	23
Installation issues	24
Installation isn't possible if MZ_HOME path contains a folder name with spaces	24
Installation reported as successful even if the platform fails to start	24
If System Insight is enabled (property "mz.system.insight" is set) in MZ 8.x, upgrade fails	25
Warning messages displayed during installation	25
User Interface issues	25
New desktop issues	25
Database Agent Assignment Tab Value Are Not Cleared	25
Database Agent MIM Browser Need To Click Twice To Close It	25
External Reference Profile Datalist Can Be Altered in Read-Only Mode	25
GCP Storage Profile Uncheck Uses GCP Profile Radio Button Unchecked	25
Login Web UI Will Go To Last Page That Last User Accessed	25
Integer field validation can be broken	25
Type Assigned indication not shown in MIM browser	25
Debug output in the Workflow Monitor maybe come corrupt	26

Aggregation Session Inspector returns an internal error if input file is corrupt	26
New profile becomes read only on save	26
Aggregation Inspector pagination fails on very large files	26
Refresh button in the Database Agent doesn't function correctly	26
Idle timeout only warns the user once	26
Cannot login to multiple platforms	26
"Database Type" Displays Blank when Switching Between Default/Adv Connection Setup	26
Data Veracity Repair jobs show on one line	26
Data Veracity Profile generate SQL pop up is small	26
Null Pointer Exception when updating password with enhanced security enabled on the new desktop	26
Accessibility Issues	27
Code Editor Issues	27
Code Completion Keyboard Shortcut Not Working When Using Built-in Mac Keyboard Layout Switcher	27
Known differences between desktops	27
Legacy desktop issues	27
In the legacy desktop an exception can occur when first logging in to the platform. Re-trying the login fixes this and it doesn't recur	27
Logging issues	28
When logging out of the legacy desktop desktop_current.log has unnecessary logs added	28
Workflow packages are creating unnecessary logs in platform.log	28
Import/Export issues	28
When importing configurations including the Open API profile the 'Custom Specification' checkbox becomes unchecked	28
When importing a workflow that runs on a specific EC group the workflow will not automatically be assigned to that group	28
Data Veracity issues	28
Unable To Search Newly Added Records By 'update_user' In Data Veracity	28
Operator '!=' Is Not Supported For Data Veracity Search For BitSet Data Types	28
Data Veracity Search Filtering For Some Fields Are Case-Sensitive	28
Changes Made To Existing Saved Filters In Data Veracity Search & Repair Cannot Be Saved	28
Data Veracity Filter's Full Query Is Not Available In Web Native UI	28
Data Veracity Search & Repair Table Listing's Sorting Does Not Work	29
Adding an Empty Query Group With a Parent Condition in Data Veracity Search & Repair Filter Will Result In An Error	29
Importing Old Data Veracity Collection Agent Workflow Configurations Returned Validation Errors	29
Data Veracity Restricted Field Displayed Un-related Field When Enable Datatype	29
Data Veracity Filter Query Column Displays ID With Decimal	30
Data Veracity Repair Jobs Start Date and End Date Are Not Following Standard DateTime Format	30
Data Veracity Filter Are Not Refresh Automatically	30
Data Veracity Filter Datetime Format Are Not Following Standard Format	30
System Import Data Veracity Profile That Pointing To Oracle Database Sometimes Hang	30
User With Execute Only Permission Still Can Do Everything in Data Veracity Error Code/Approve Delete/Restricted Fields	30
User Given Execute Only Permission On Data Veracity Profile Is Unable To Select Data Veracity Profile To Search	30
Data Veracity Repair Jobs are Showing Platform Timezone	30
Incorrect Validation Message When Select A Database Profile With Execute Permission	31
Data Veracity View UDR Are Showing Platform Timezone	31
Data Veracity Exported MIM Values Showing Platform Timezone	31
Data Veracity New Restricted Fields that was Used for an Existing Repair Rule Not Disabled	31
Data Veracity Execute permission is unable to view records in Data Veracity Repair Rules and Data Veracity Restricted Fields	31
Other issues	31

Error Thrown When SAPCC Agent Not Added With Any Host	31
Inappropriate Validation Handling On Workflow Group Scheduling	31
GCP PubSub Profile Throws Improper Validation Error Message	31
Database Profile Validation Message	31
Database Forwarding Agent Validation Message	32
HTTP APL Functions Provide Default Keystore	32
Same Naming in Workflow Packages With Different Case Can Cause Platform Stability Issues	32
Applying SQL INSERT operation with Database Agent for Oracle Database	32
5G Profile Not Backward Compatible	32
Invalid SQL Forwarder Workflow Without "Commit Window Size" Setting	32
mzsh topo show pico-view doesn't show full information	32
Installer accepts that the install command is executed even if the create command has not been executed	32
External References can be removed when a workflow is dependent on it	32
Conditional Trace allows negative values	32
Event Notification - StackOverflowError on events with big text contents	33
ClassCastException after re-import WF configuration table	33
Invalid JMS Collector Workflow Without "Client ID" Set for Durable Subscription	33
Missing <Agent> - 5G <Field> Parameters in Workflow Table and Workflow Instance Table	33
Bug Fixes	35

The release information for MediationZone 9.0 contains the following:

- [Executive Summary](#)
- [New Features and Functionality](#)
- [Important Information](#)
- [Known Issues](#)
- [Bug Fixes](#)

Executive Summary

MediationZone empowers organizations to liberate the value hidden in their usage information via a unique approach to managing data that supports multiple mission-critical aspects of their business. The system is designed in such a way that customers benefit from fewer integration points and flexible data management.

MediationZone bridges components residing in any type of network architecture, providing comprehensive functionality that ensures systems can communicate with each other as effectively as possible. Information is created based on raw data distributed across any number of network elements and systems. Data streams are optimized and enriched, translating into reduced cost for hardware, software licenses and maintenance while providing new opportunities to differentiate and personalize services.

MediationZone is designed for online and offline processing on one platform. File-based collection and processing is configured with the same graphical workflow technology that is used to create bidirectional real-time communication streams.

Design and change in the system is achieved through configuration rather than hard-coding. An intuitive and powerful drag-and-drop management user interface covers all aspects of workflow life-cycle management.

Once configured, workflows are automatically deployed on designated servers that are part of an installation and executed in accordance with defined scheduling criteria. High availability capabilities ensure that workflows are executing at all times.

New Functionality

The following new functionality has been added in this release:

- [Accessible Web UI](#)
- [Unit Test Framework](#)
- [Workflow Packages](#)
- [Standalone Workflow execution mode replaces ECSA](#)
- [JSON Export Format](#)
- [Native JSON and CSV Decoding](#)
- [Security Profile](#)
- [Java 17](#)
- [Realtime Inter Workflow Transaction Safety](#)
- [Google GCP Cloud Storage Support](#)
- [Conditional Trace 2.0](#)
- [Support for Azure KeyVault](#)
- [Single Sign-On \(SSO\) Support via OIDC](#)
- [Support for Azure Data Explorer \(KustoDB\)](#)

System Requirements

For information about system requirements, see [System Requirements](#).

Important Information

The following important information applies:

[Functionality Not Available](#)

[Standalone Execution Context replaced with Standalone Workflows](#)

Replaced and Sunset Functionality

Some Functionality only Available in Legacy Desktop Client

Special Handling When Upgrading

- System Insight
- Configuration Spaces
- DTK Agents and plug-ins

REST not Supported for Conditional Trace

New Delivery Procedure

Context-Sensitive Help and Offline Documentation in Browser Not Available

See [Important Information](#) for full details

Known Issues Overview

The following are an overview of the known issues in this release:

Installation issues

- Installation isn't possible if MZ_HOME path contains a folder name with spaces
- Installation reported as successful even if the platform fails to start

User Interface issues

- New web desktop issues
 - Database Agent Assignment Tab Value Are Not Cleared
 - Database Agent MIM Browser Need To Click Twice To Close It
 - External Reference Profile Datalist Can Be Altered in Read-Only Mode
- Accessibility Issues
- Code Editor Issues
 - Code Completion Keyboard Shortcut Not Working When Using Built-in Mac Keyboard Layout Switcher
- Known differences between desktops
- Original desktop issues
- Logging issues
- Import/Export issues
- Data Veracity issues
 - Unable To Search Newly Added Records By 'update_user' In Data Veracity
 - Operator '==' Is Not Supported For Data Veracity Search For BitSet Data Types
 - Data Veracity Search Filtering For Some Fields Are Case-Sensitive
 - Changes Made To Existing Saved Filters In Data Veracity Search & Repair Cannot Be Saved
 - Data Veracity Filter's Full Query Is Not Available In Web Native UI
 - Data Veracity Search & Repair Table Listing's Sorting Does Not Work
 - Adding an Empty Query Group With a Parent Condition in Data Veracity Search & Repair Filter Will Result In An Error
 - Importing Old Data Veracity Collection Agent Workflow Configurations Returned Validation Errors
 - Data Veracity Restricted Field Displayed Un-related Field When Enable Datatype
 - Data Veracity Filter Query Column Displays ID With Decimal
 - Data Veracity Repair Jobs Start Date and End Date Are Not Following Standard DateTime Format
 - Data Veracity Filter Datetime Format Are Not Following Standard Format
 - System Import Data Veracity Profile That Pointing To Oracle Database Sometimes Hang
 - User With Execute Only Permission Still Can Do Everything in Data Veracity Error Code/Approve Delete/Restricted Fields
 - User Given Execute Only Permission On Data Veracity Profile Is Unable To Select Data Veracity Profile To Search

- [Other issues](#)
 - [Audit Profile Unable To Load Database Profile With Oracle 19c](#)
 - [Error Thrown When SAPCC Agent Not Added With Any Host](#)
 - [Inappropriate Validation Handling On Workflow Group Scheduling](#)
 - [GCP PubSub Profile Throws Improper Validation Error Message](#)
 - [Database Profile Validation Message](#)
 - [HTTP APL Functions Provide Default Keystore](#)
 - [Same Naming in Workflow Packages With Different Case Can Cause Platform Stability Issues](#)
 - [Applying SQL INSERT operation with Database Agent for Oracle Database](#)

See [Known Issues](#) for full details.

Installation, Upgrade and Downgrade

For instructions on how to install, upgrade and downgrade, refer to [Installation Instructions](#).

New Features and Functionality

In this section you can see information about the new features and functionality in this release.

- [Accessible Web UI](#)
- [Unit Test Framework](#)
- [Workflow Packages](#)
- [Standalone Workflow execution mode replaces ECSA](#)
- [JSON Export Format](#)
- [Native JSON and CSV Decoding](#)
- [Security Profile](#)
- [Java 17](#)
- [Realtime Inter Workflow Transaction Safety](#)
- [Google GCP Cloud Storage Support](#)
- [Conditional Trace 2.0](#)
- [Support for Azure KeyVault](#)
- [Single Sign-On \(SSO\) Support via OIDC](#)
- [Support for Azure Data Explorer \(Kusto Query\)](#)

Accessible Web UI

In previous versions of **MediationZone** there have been a mix of user interfaces, both local clients and various web based interfaces. In this release we are introducing a brand-new WebUI which consolidates these interfaces into one web based interface containing functionality from the web based Sys Admin Interface, the Web Interfaces for Platform and ECs as well as the majority of the functionality from the previous local Desktop, now referred to as Legacy Desktop. The new desktop is undergoing heavy development and will continue to be developed bringing new functionality to the interface in future releases. While this user interface is being developed the original desktop, and its web based version, will continue to be available for use and will function as normal.

This new desktop will bring a new, modern look and feel to the **MediationZone** interface and will have the advantage of not requiring any user download in order to access it, just take your pick of browser from Microsoft Edge, Chrome or Firefox. Another key benefit of this new interface is that it will be fully accessible for users using screen readers or keyboard navigation. This first release is a big step forward to comply with accessibility requirements according to WCAG 2.1 AA, with full adherence to the standard coming in a subsequent release.

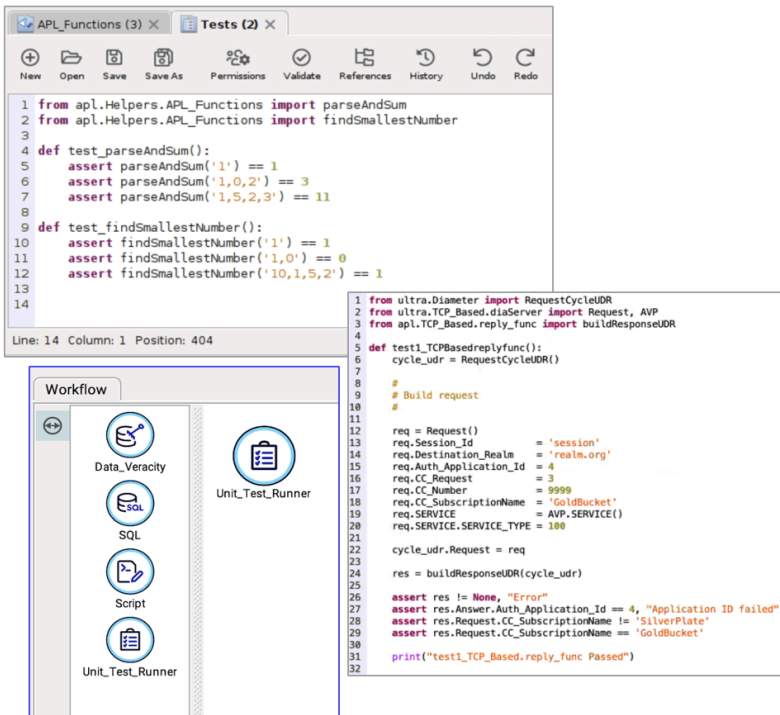

New Desktop interface

See [Desktop Overview](#) for more information.

Unit Test Framework

You can now execute unit test scenarios on Global APL functions, and to perform basic Workflow tests, based on Python. The test reports are saved as JUnit XML file, and the test configurations can be exported and imported to other MediationZone deployments.

Unit tests in APL and Unit Test Runner

Two new Unit Test agents are available; [Unit Test Configuration](#) and [Unit Test Runner](#). Together with the new [Python Module](#) configuration and [Python Manager](#) they can be used to create your own auto tests for APL code.

Workflow Packages

MediationZone configuration can now be exported using the new Workflow Package format, which is a versioned, pre-compiled, self-contained, package (unlike the traditional system export format, which is moving configuration objects that must be compiled in the target environment). Since the configurations are self-contained, they will not affect configuration that is already present in the target environment. This new format improves configuration transport as it is faster, more robust, and enables atomic upgrades and rollbacks. This functionality replaces the older configuration spaces concept.

Create package

Workflow Packages

See [Workflow Packages](#). for more information

Standalone Workflow execution mode replaces ECSA

The PICO type ECSA (Execution Context - Standalone) has been replaced with a generic EC (Execution Context) in **MediationZone 9.0**. Standalone execution is instead controlled on a workflow level through the workflow properties (a real-time workflow can execute either in "Normal" mode, or "Standalone" mode) and the generic EC can run both Normal and Standalone workflows.

JSON Export Format

A new JSON based export format has been added, improving compatibility with version control systems, and it is accessible from within the Desktop (i.e. it does not require command line access like the older vcexport format).

```

No issues detected

Exported JSON

Native JSON and CSV Decoding

In addition to the MZ Tagged format, CSV and JSON are also available as built-in decoder formats, improving usability when working with common text-based formats.

Built-in decoders

For more information, see [Format Management Overview](#).

Security Profile

The Security profile is a generic profile that you can use to create encryption configurations that can be used by various agents, e.g. the HTTP/2, Kafka, and Diameter agents. This profile enables centralized key management for improved security and ability to tie key management to environment.

General Advanced External Keystore

------	---------------------

The Security profile

For more information, see [Security Profile](#).

Java 17

Support for Java 8 is sunset and this version is built and runs on Java 17, which improves security, functionality, performance, and support.

Realtime Inter Workflow Transaction Safety

To avoid issues with data loss due to aborting real-time workflows or failure to write to disk, we have added transaction safety to Inter Workflow.

In the Real-Time Inter Workflow forwarding agent, there is now an option called Send response UDR which confirms whether writing to disk has succeeded or not.

Inter Workflow forwarding agent

See [Inter Workflow Forwarding Agent in a Real-Time Workflow](#) for more information.

Google GCP Cloud Storage Support

It is now possible to move data between systems using Google Cloud Storage using two new agents: GCP Storage Collection and GCP Storage Forwarding.

GCP_Storage_Collector

GCP_Storage_Forwarder

Cloud Storage Collection and Forwarding Agents

See [GCP Agents](#) for more information.

Conditional Trace 2.0

Conditional Trace has been rewritten to track all UDRs in a workflow that match the applied filter criteria, for instance if all UDRs originating from a particular set of users need to be monitored as they flow through the system.

The new versions is designed to provide plug-and-play interoperability with Jaeger, a state-of-the-art trace logging system. This provides complete trace logs and a rich set of filtering and troubleshooting tools.

See [Conditional Trace](#) for more information.

Support for Azure KeyVault

With Azure KeyVault, your passwords and certificates are stored and maintained in a central location in Azure environments, which improves security.

To enable this we have extended the Security Profile to be able to use Azure KeyVault as a backend, supported for SAP RFC, and agents/feature using the Azure KeyVault profile (EventHub, ADLS2, APL getSecret).

New configuration - Secrets Profile

Azure KeyVault profile

See [Azure KeyVault Profile](#) for more information.

Single Sign-On (SSO) Support via OIDC

To enable centralized user management and control, it is now possible to tie **MediationZone** to a centralized identity provider. This enables users to log in using SSO, along with multi factor authentication flows.

The image shows a login interface with a text input field, a password field labeled 'Password', a 'Login' button, and a 'Login With SSO' button below them.

Login with SSO

For more information, see [Single Sign On](#).

Support for Azure Data Explorer (Kusto Query)

Azure Data Explorer is a fast, fully managed data analytics service for real-time analysis on large volumes of data streaming from applications, websites, IoT devices, and more.

MediationZone is now able to use insights derived by Azure Data Explorer, in the form of enrichment data. A new APL function to query Azure Data Explorer using Kusto Query Language has been added.

See [Database Table Functions](#) for more information.

Important Information

The following provides important information related to MediationZone 9.0:

- [Functionality Not Available](#)
- [Standalone Execution Context replaced with Standalone Workflows](#)
- [Replaced and Sunset Functionality](#)
- [Some Functionality only Available in Legacy Desktop Client](#)
- [Special Handling When Upgrading](#)
 - [System Insight](#)
 - [Configuration Spaces](#)
 - [DTK Agents and plug-ins](#)
- [REST not Supported for Conditional Trace](#)
- [New Delivery Procedure](#)
- [Context-Sensitive Help and Offline Documentation in Browser Not Available](#)
- [Performance Degradation When Using Unsupported Oracle versions and Oracle JDBC drivers](#)
- [Removal of Interactive Mode in MZSH](#)

Functionality Not Available

While the vast majority of features and agents that are available in MediationZone 8.3 are also available in MediationZone 9.0, not all agents and features are present.

The delta that exists, and we plan to address is:

Feature / Agent	Status
FTAM Siemens EWSD Agent	Planned for an upcoming release
FTAM Ericsson IOG Agent	Planned for an upcoming release
FTP Nokia NMSC Agent	Planned for an upcoming release
FTP Nokia DX200 Agent	Planned for an upcoming release
IPDR SP Agent	Planned for an upcoming release
LGU GTP' Agent	Planned for an upcoming release
Reference Data Management	Planned for an upcoming release
Distributed KPI Management	Planned for an upcoming release
Streaming Telemetry Agent	Planned for an upcoming release
MySQL Cluster support for Usage Management and PCC	Planned for an upcoming release

Standalone Execution Context replaced with Standalone Workflows

The PICO type ECSA (Execution Context - Standalone) has been replaced with a generic EC (Execution Context) in MediationZone 9.0. Standalone execution is instead controlled on a workflow level (workflow can execute either in "Normal" mode, or "Standalone" mode) and the generic EC can run both Normal and Standalone workflows.

ECSAs are upgraded to ECs, and the process to control workflow execution mode is described here: [Execution Tab](#)

Replaced and Sunset Functionality

Functionality that has been replaced with a functional equivalent or sunset from the product is described in the MediationZone 9.0 Product Catalog here: [12. APPENDIX - Changes from 8.3 Product Catalog](#)

Some Functionality only Available in Legacy Desktop Client

Certain features have not yet made it into the new Desktop and are only available in the Legacy Desktop client. These are described in [Legacy Desktop](#).

Special Handling When Upgrading

When upgrading to 9.0 you may need to adjust some of your configurations if you are using:

System Insight

System Insight is now using a Prometheus backend instead of InfluxDB.

In order to use the new version Prometheus needs to be installed, and workflows using the System Insight forwarding agent need to be updated to leverage the Prometheus forwarding agent instead.

Note that the System Insight collection agent is not replaced with a Prometheus Collection agent, as data can be retrieved directly in Prometheus instead.

Configuration Spaces

Configuration Spaces is replaced with the new Workflow Packages functionality. Prior to upgrading, make sure to export the configuration from inactive configuration spaces as only the active space is carried across during the upgrade process.

DTK Agents and plug-ins

If agents and/or plug-ins developed using DTK are present in the system to be upgraded, these must be:

1. Removed from the system prior to upgrade
2. Rebuilt using the MediationZone 9.0 DTK and Java 17
3. The new, rebuilt, versions applied to the system after upgrade has finished

Full upgrade instructions are available here: [Standard Upgrade Procedure](#)

REST not Supported for Conditional Trace

In this new version of Conditional Trace, REST is not supported, configurations can be done in Desktop only.

New Delivery Procedure

MediationZone is now downloadable from GitHub, and apart from the license key that is delivered separately, the link to all release deliverables can be found in the [MediationZone Release Information](#) page.

Context-Sensitive Help and Offline Documentation in Browser Not Available

For this release, documentation is available in InfoZone and PDF format only.

Performance Degradation When Using Unsupported Oracle versions and Oracle JDBC drivers

As a result of our performance testing for MediationZone 9.0 and with using Oracle database, there are noticeable performance degradation when connecting to Oracle versions older than Oracle 19 and using Oracle JDBC drivers older than OJDBC 10. It is our recommendation that you use the latest supported Oracle versions and Oracle JDBC drivers when using MediationZone 9.0.

Removal of Interactive Mode in MZSH

The Interactive mode has been removed from mzsh in MediationZone 9.0.1.0.

Known Issues

In MediationZone 9.0, there are the following known issues:

- Installation issues
 - Installation isn't possible if MZ_HOME path contains a folder name with spaces
 - Installation reported as successful even if the platform fails to start
 - If System Insight is enabled (property "mz.system.insight" is set) in MZ 8.x, upgrade fails
 - Warning messages displayed during installation
- User Interface issues
 - New desktop issues
 - Database Agent Assignment Tab Value Are Not Cleared
 - Database Agent MIM Browser Need To Click Twice To Close It
 - External Reference Profile Datalist Can Be Altered in Read-Only Mode
 - GCP Storage Profile Uncheck Uses GCP Profile Radio Button Unchecked
 - Login Web UI Will Go To Last Page That Last User Accessed
 - Integer field validation can be broken
 - Type Assigned indication not shown in MIM browser
 - Debug output in the Workflow Monitor maybe come corrupt
 - Aggregation Session Inspector returns an internal error if input file is corrupt
 - New profile becomes read only on save
 - Aggregation Inspector pagination fails on very large files
 - Refresh button in the Database Agent doesn't function correctly
 - Idle timeout only warns the user once
 - Cannot login to multiple platforms
 - "Database Type" Displays Blank when Switching Between Default/Adv Connection Setup
 - Data Veracity Repair jobs show on one line
 - Data Veracity Profile generate SQL pop up is small
 - Null Pointer Exception when updating password with enhanced security enabled on the new desktop
 - Accessibility Issues
 - Code Editor Issues
 - Code Completion Keyboard Shortcut Not Working When Using Built-in Mac Keyboard Layout Switcher
 - Known differences between desktops
 - Legacy desktop issues
 - In the legacy desktop an exception can occur when first logging in to the platform. Re-trying the login fixes this and it doesn't recur
- Logging issues
 - When logging out of the legacy desktop desktop_current.log has unnecessary logs added
 - Workflow packages are creating unnecessary logs in platform.log
- Import/Export issues
 - When importing configurations including the Open API profile the 'Custom Specification' checkbox becomes unchecked
 - When importing a workflow that runs on a specific EC group the workflow will not automatically be assigned to that group
- Data Veracity issues
 - Unable To Search Newly Added Records By 'update_user' In Data Veracity
 - Operator '==' Is Not Supported For Data Veracity Search For BitSet Data Types
 - Data Veracity Search Filtering For Some Fields Are Case-Sensitive
 - Changes Made To Existing Saved Filters In Data Veracity Search & Repair Cannot Be Saved
 - Data Veracity Filter's Full Query Is Not Available In Web Native UI
 - Data Veracity Search & Repair Table Listing's Sorting Does Not Work

- Adding an Empty Query Group With a Parent Condition in Data Veracity Search & Repair Filter Will Result In An Error
- Importing Old Data Veracity Collection Agent Workflow Configurations Returned Validation Errors
- Data Veracity Restricted Field Displayed Un-related Field When Enable Datatype
- Data Veracity Filter Query Column Displays ID With Decimal
- Data Veracity Repair Jobs Start Date and End Date Are Not Following Standard DateTime Format
- Data Veracity Filter Are Not Refresh Automatically
- Data Veracity Filter Datetime Format Are Not Following Standard Format
- System Import Data Veracity Profile That Pointing To Oracle Database Sometimes Hang
- User With Execute Only Permission Still Can Do Everything in Data Veracity Error Code/Approve Delete/Restricted Fields
- User Given Execute Only Permission On Data Veracity Profile Is Unable To Select Data Veracity Profile To Search
- Data Veracity Repair Jobs are Showing Platform Timezone
- Incorrect Validation Message When Select A Database Profile With Execute Permission
- Data Veracity View UDR Are Showing Platform Timezone
- Data Veracity Exported MIM Values Showing Platform Timezone
- Data Veracity New Restricted Fields that was Used for an Existing Repair Rule Not Disabled
- Data Veracity Execute permission is unable to view records in Data Veracity Repair Rules and Data Veracity Restricted Fields
- Other issues
 - Error Thrown When SAPCC Agent Not Added With Any Host
 - Inappropriate Validation Handling On Workflow Group Scheduling

Installation issues

Installation isn't possible if MZ_HOME path contains a folder name with spaces

If the MZ_HOME path contains and spaces the installation will fail. Please ensure the MZ_HOME doesn't contain any spaces prior to installing.

Installation reported as successful even if the platform fails to start

In some circumstances during installation the installer may report as successful when the platform has not started.

If System Insight is enabled (property "mz.system.insight" is set) in MZ 8.x, upgrade fails

If System Insight is enabled in the MZ 8.x installation, that is, if the property “mz.system.insight” is set, then upgrade to MZ 9.0 will fail. The system will not start up since the System Insight packages are no longer available.

The issue is fixed in MZ 9.0.1.0. From this version the property has no effect in the MZ 9 system.

Warning messages displayed during installation

When the user performs “*setup.sh prepare*”, a warning message “*setSecurityManager will be removed in a future release*” is displayed. This does not impact functionality of MZ 9 installation and will be handled in future versions of MZ.

User Interface issues

New desktop issues

Database Agent Assignment Tab Value Are Not Cleared

When Value Type is set to "To UDR" or "NULL", the Value column are not cleared.

Database Agent MIM Browser Need To Click Twice To Close It

The MIM browser open from database agent, need to close it by hitting twice on cancel button or the X button to close it.

External Reference Profile Datalist Can Be Altered in Read-Only Mode

When certain procedures are made, it is possible to alter the data list found in the external reference profile while the read-only mode is used. This causes a system-wide `DRRCPEException` to be thrown.

GCP Storage Profile Uncheck Uses GCP Profile Radio Button Unchecked

When open a profile with Use GCP Profile checked has incorrect setting of the disabled Input Option radio buttons, non is selected.

Login Web UI Will Go To Last Page That Last User Accessed

User A log out from web UI, and User B login, it will automatically go to the page last accessed by User A.

<https://digitalroute.atlassian.net/browse/XE-8966> [Vaadin] GCP Storage Profile Uncheck Uses GCP Profile Radio Button Unchecked

Integer field validation can be broken

Inputting integer values outside of the expected range can break the validation in the UI.

Type Assigned indication not shown in MIM browser

This can be viewed in the Legacy desktop if required.

Debug output in the Workflow Monitor maybe come corrupt

If the load becomes too great on the debug window the output may become corrupt and un-readable. The running of the workflow is not affected.

Aggregation Session Inspector returns an internal error if input file is corrupt

If the file is corrupt only an internal error is returned with no explanation.

New profile becomes read only on save

When creating a new profile as soon as it is saved it becomes read only. The user needs to click the edit button in order to continue editing.

Aggregation Inspector pagination fails on very large files

With particularly large files the Aggregation Inspector will not scroll through all results. Users will need to use the Legacy Desktop in these cases.

Refresh button in the Database Agent doesn't function correctly

When clicking the refresh button the table name is not refreshed correctly.

Idle timeout only warns the user once

Inactive users will be logged out after a configurable period, following a warning to that effect. If a user is active after the warning they won't be logged out, but if they are inactive again then they will be logged out with no warning.

Cannot login to multiple platforms

It is not currently possible to login to multiple separate platforms using the new UI in one browser. Users can use different browsers, incognito modes or the Legacy Desktop if this is required.

"Database Type" Displays Blank when Switching Between Default/Adv Connection Setup

Switching between Default and Adv Connection Setup can result in there being no data in the fields.

Data Veracity Repair jobs show on one line

When viewing the repair jobs in the new UI they are displayed on one line which is hard to read.

Data Veracity Profile generate SQL pop up is small

The pop up for SQL generation is very small and difficult to use.

Null Pointer Exception when updating password with enhanced security enabled on the new desktop

When you install the Platform with the following properties set to true:

- `mz.security.user.control.enabled`
- `mz.security.user.password.reset.enabled`

When logging in for the first time, a prompt to update the password will occur. When logging in for the first time on the new desktop, attempting to update the password will lead to a Null Pointer Exception. It is recommended to log onto the legacy desktop first to update the password for the account first before logging into the new desktop.

Accessibility Issues

The new web-native desktop aims to be fully accessible, but there are currently some outstanding issues regarding this. These include:

- In some interfaces, the keyboard navigation doesn't follow the ideal order or convention
- Some icons have unnecessary alt text
- Some checkboxes are not correctly labelled
- Failure messages, for example on failed login, don't have clear enough contrast
- Page loading is not announced correctly
- Some minor elements are not read correctly by screen readers
- Keyboard navigation may not be able to get to sub-menu items of some table menu items that have several levels of sub menus

Code Editor Issues

The code editor in the new web-native desktop provides code completion and syntax highlighting there are some known issues with syntax highlighting not being correct, it is not possible to add tabs to code and code completion cannot be activated on a Mac if multiple keyboard layouts are enabled.

Code Completion Keyboard Shortcut Not Working When Using Built-in Mac Keyboard Layout Switcher

When attempting to use the code completion function in agents or profiles, for example, the [Analysis agent](#), the built-in keyboard shortcut of **Command + Space** on a Mac computer will not trigger the code completion dialog box.

Known differences between desktops

There are some known, minor issues with differences between the two desktops.

Legacy desktop issues

In the legacy desktop an exception can occur when first logging in to the platform. Re-trying the login fixes this and it doesn't recur

Logging issues

When logging out of the legacy desktop `desktop_current.log` has unnecessary logs added

Workflow packages are creating unnecessary logs in `platform.log`

Import/Export issues

When importing configurations including the Open API profile the 'Custom Specification' checkbox becomes unchecked

This needs to be manually corrected to enable the workflows to run correctly.

When importing a workflow that runs on a specific EC group the workflow will not automatically be assigned to that group

This needs to be manually corrected.

Data Veracity issues

Unable To Search Newly Added Records By 'update_user' In Data Veracity

When a new record is added to the Data Veracity table, the `update_user` column is set to **null**. The query operators such as "contains/doesn't contain" require at least an empty string("") value to be able to filter out the result.

Operator '==' Is Not Supported For Data Veracity Search For BitSet Data Types

When using Data Veracity Search & Repair function, the exact match operator '==' is not supported for the bitset data type.

Data Veracity Search Filtering For Some Fields Are Case-Sensitive

The filtering for the `source_node` and `message` fields in the Data Veracity Search & Repair table are case-sensitive.

Changes Made To Existing Saved Filters In Data Veracity Search & Repair Cannot Be Saved

If you have an existing saved filter for Data Veracity Search & Repair function, loading the saved filter and then making changes to its filter properties do not allow you the option to save and overwrite the saved filter.

Data Veracity Filter's Full Query Is Not Available In Web Native UI

The full filter query for Data Veracity is not available for viewing in the web ui. A partial display of the query can be seen at the filter listing under Data Veracity > Filter listing.

Name	Profile	Type	Query	Actions
cancelBatch_decode1	data_veracity_batch.dy_cancelBatch_profile	BATCH	ERROR_CODE = 'ERR3' AND SOURCE_NODE LIKE ('%Fail_Declare%') AND MESSAGE LIKE ('Invalid id	Edit

Data Veracity Search & Repair Table Listing's Sorting Does Not Work

The sorting function for the Data Veracity Search & Repair table listing is not working.

Adding an Empty Query Group With a Parent Condition in Data Veracity Search & Repair Filter Will Result In An Error

Attempting to add an empty query group with a parent condition will cause an error to be thrown upon clicking OK. A sample of the query setup is shown below.

The screenshot shows a filter configuration window. At the top, there are radio buttons for 'AND' (selected) and 'OR'. To the right are 'Add' and 'Add Group' buttons. Below this, there is a filter rule: 'MESSAGE' in a dropdown, followed by 'is not null' in another dropdown, and a '-' sign. Below this is a nested query group box. Inside this box, there are radio buttons for 'AND' (selected) and 'OR'. To the right of this box are 'Add', 'Add Group', and 'Remove Group' buttons.

Importing Old Data Veracity Collection Agent Workflow Configurations Returned Validation Errors

If you have an old Data Veracity Collection Agent Workflow configuration from version 8.x, it is possible that validation errors about invalid Analysis Agents may occur.

Example error during import:

```
The following agents returned validation errors.
Analys
is_1 is invalid.
The UDR type DataVeracityUDR (DataVeracity) doesn't exist
```

Example error when viewing the invalid workflow Analysis Agent configuration:

```
Error: Failed to set UDR Types
Message: Unable to create UDR type description from DataVeracityUDR (DataVeracity).
```

To resolve this, you will need to re-add the Data Veracity UDR for Analysis Agent input UDR Types or use the **Set To Input** button if applicable. After adding the appropriate Analysis UDR Types, save the workflow configuration.

Data Veracity Restricted Field Displayed Un-related Field When Enable Datatype

In Data Veracity Restricted Fields page, when we create New Restricted Fields, enable Datatype and select Map from the dropdown list, you would find that subsubUDR which is not related is displayed.

Data Veracity Filter Query Column Displays ID With Decimal

In the Data Veracity Filter page, when we have a filter that is saved with an ID field, a decimal value will be displayed in the filter result list Query column.

Example: ID > 2.0

Data Veracity Repair Jobs Start Date and End Date Are Not Following Standard DateTime Format

Repair Jobs Start Datetime and End Datetime are currently not displaying format YYYY-MM-dd HH:mm:ss

Data Veracity Filter Are Not Refresh Automatically

The Filter page is not always the latest, after creating a new Filter from the Data Veracity Search page, you may need to click the **Refresh** button to view it.

Data Veracity Filter Datetime Format Are Not Following Standard Format

In the Data Veracity Search page, the result list displays format is yyyy-mm-dd hh:mm:ss

In the Data Veracity Filter page, when we construct a Filter query, and select any Datetime field, the displays format is dd/mm/yyyy.

System Import Data Veracity Profile That Pointing To Oracle Database Sometimes Hang

Before we create Data Veracity tables in the Oracle database, the system import Data Veracity profile might cause the import process to hang.

User With Execute Only Permission Still Can Do Everything in Data Veracity Error Code/Approve Delete/Restricted Fields

Currently, the user's access group that has given Execute Only permission on the below settings in Access Controller can do everything on the mentioned page:

- Data Veracity Error Code
- Data Veracity Approve Delete
- Data Veracity Restricted Fields

User Given Execute Only Permission On Data Veracity Profile Is Unable To Select Data Veracity Profile To Search

In the Data Veracity Search page, the user gets a "Data Veracity Profile not found" error when selecting a Data Veracity Profile that set permission Execute Group to the user's access group.

Data Veracity Repair Jobs are Showing Platform Timezone

In Data Veracity Repair Jobs page, Start Date and End Date are still displaying according to Platform Timezone now instead of Client timezone.

Incorrect Validation Message When Select A Database Profile With Execute Permission

When user new Data Veracity Profile and select a Database Profile that user only given Execute permission, the validation message prompted Unable to retrieve Database Profile.

Data Veracity View UDR Are Showing Platform Timezone

Date time in View UDR page that we launch from Data Veracity Search or Data Veracity Approve Delete are showing platform timezone instead of client timezone.

Data Veracity Exported MIM Values Showing Platform Timezone

Currently the exported MIM Values in CSV from Data Veracity are displaying platform timezone instead of client timezone.

Data Veracity New Restricted Fields that was Used for an Existing Repair Rule Not Disabled

If setting a new restricted field that was used in a previously created Repair Rule, it is expected that the rule on the said field should gray out when viewing the saved Repair Rule and ignored when applying repair tasks. However, the rule on the said field still appears to be editable in the old Saved Repair Rule.

Data Veracity Execute permission is unable to view records in Data Veracity Repair Rules and Data Veracity Restricted Fields

When users click on the Data Veracity Repair Rules, no response is available, while clicking on the Data Veracity Restricted Fields will prompt an error.

Other issues

Error Thrown When SAPCC Agent Not Added With Any Host

In the SAP CC Batch agent, do not add any host, click the **Save As** button, and you will find the error shown below:
java.lang.NullPointerException: Cannot invoke "String.matches(String)" because "hosts" is null

Inappropriate Validation Handling On Workflow Group Scheduling

In Workflow Group Scheduling, when adding a duplicate execution day plan, it prompts the wrong validation message content and if the user continues to save, scheduling data will be wiped off.

GCP PubSub Profile Throws Improper Validation Error Message

When selecting a GCP Profile in a new GCP PubSub Profile config, the program package name is prompted at the validation error message window.

Database Profile Validation Message

The Database Profile validation message did not explicitly mention which field cause the validation error.

Database Forwarding Agent Validation Message

In Database Forwarding Agent, when we have a field NULL/To UDR, the validation message that prompted is not properly describe the problem.

HTTP APL Functions Provide Default Keystore

HTTP APL functions provide a default keystore which is unusable, user needs to add the keystore manually with the property `https.apl.keystore_location`

Same Naming in Workflow Packages With Different Case Can Cause Platform Stability Issues

When workflow packages with the same names and different characters cases are handled by the platform, this can cause serious issues for the platform. It has been detected that this will cause exceptions to the log files from the resulting resources handling.

Applying SQL INSERT operation with Database Agent for Oracle Database

Performance of SQL INSERT operation may be slower using the JDBC 19c driver (`ojdbc8.jar`) than when using the JDBC 12.1.0.2 driver (`ojdbc7.jar`).

5G Profile Not Backward Compatible

Users may encounter validation errors during data import from version 8.x. This results in missing configurations in the 5G Profile and workflow, and users are required to reconfigure the 5G related settings.

Invalid SQL Forwarder Workflow Without "Commit Window Size" Setting

SQL Forwarder workflow without the "Commit Window Size" being set will encounter validation error during import.

mzsh topo show pico-view doesn't show full information

The mzsh topo show pico-view doesn't show the pico names in the output. Picos can be viewed in the desktops

Installer accepts that the install command is executed even if the create command has not been executed

The installer doesn't fail with an appropriate message if the create command has not been executed prior to the install command being run.

External References can be removed when a workflow is dependent on it

External references of the type Database Properties can be removed even if they are in use. Any workflows using these references will become invalid.

Conditional Trace allows negative values

The validation is failing such that negative values are allowed where they shouldn't be. Users should not input negative values.

Event Notification - StackOverflowError on events with big text contents

When using a regex expression in event notification if the regex is very broad and it attempts to match within a very large text event the thread will fail and a stack overflow error will be put in the system log.

ClassCastException after re-import WF configuration table

Invalid JMS Collector Workflow Without "Client ID" Set for Durable Subscription

JMS Collector workflow with Durable Subscription enabled but without a unique Client ID set, might encounter validation error during import.

Missing <Agent> - 5G <Field> Parameters in Workflow Table and Workflow Instance Table

The **HTTP2_Server_1 - 5G - 5G Profile**, **HTTP2_Server_1 - 5G - Primary NRF Address**, and **HTTP2_Server_1 - 5G - Secondary NRF Addresses** parameters in version 8.3.2.X are missing from the Workflow Table and workflow instance table when upgrading from version 8.3.2.1 onwards to MediationZone 9.

The screenshot shows the 'Workflow Table' configuration window. The 'Fields' section is active, showing a list of parameters. The following table represents the data shown in the screenshot:

Name	Final	Default	Per Workflow
Workflow - Execution - Execution Settings	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Workflow - Execution - Debug Type	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Workflow - Execution Realtime - Threads	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Workflow - Execution Realtime - Queue Size	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Security Profile	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Local Address	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Port	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Client timeout	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Server timeout	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - Character encoding	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Http2 - GZIP Compression Level	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Authorization - Authorization Level	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - Authorization - Public Key	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - 5G - 5G Profile	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - 5G - Primary NRF Address	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
HTTP2_Server_1 - 5G - Secondary NRF Addresses	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Below the table, there is an 'External Reference' section with a checkbox for 'Enable External Reference' (unchecked) and a 'Profile' dropdown menu set to '(None)'. A 'Browse...' button is next to the dropdown. At the bottom, there are 'OK', 'Cancel', and 'Help' buttons.

The '<agent> - 5G - <field>' parameters in version 8.3.2.X

This is because the three parameters are classified under a different sub-category, the '5G Support' as **HTTP2_Server_1 - 5G Support - 5G Profile**, **HTTP2_Server_1 - 5G Support - NRF Address**, and **HTTP2_Server_1 - 5G Support - Secondary NRF Address**.
